III.—SYSTEMATIC.

The classification of Sharpe's "Handlist" is here followed as regards orders and families. The genera are arranged alphabetically in the families. This method is a change from the old system, as so many alterations in nomenclature and generic status have been introduced since the publication of the "Handlist."

Full references are given only in the case of new genera and species. In other cases the numeral in Clarendon refers to the List of Titles, where the full reference will be found.

SECOND SUPPLEMENTARY LIST OF ABBREVIATIONS WITH TITLES OF PERIODICAL PUBLICATIONS, CONTAINING PAPERS DEALING WITH MATTERS OF ZOOLOGICAL IMPORTANCE.

Since the issue of the last volume of the Zoological Record a number of new periodicals have commenced publication, a few old ones have been revived, while a few have been accidentally omitted from the previous list.

It has therefore been found necessary to print a second supplementary list of these. As before, the number of the periodical in the World List is given, and the initial letter in clarendon indicates the library where the periodical may be consulted.

The complete list of Publications was printed in Vol. LXIV for 1927; the first Supplementary list in Vol. LXV for 1928.

The following are the library symbols used in this list:—
